

LECKSUCHSPRAY

LEAK DETECTION SPRAY. Finds every leak.

Areas of application / Temperatures

Air brakes, pressure regulators, pressure tanks, gas and air ducting hoses and pipes, systems with flammable gases, air conditioning and refrigeration plants, welded and soldered joints, valves and fittings, etc.

Application temperature -15 °C to +50 °C

Tests

Tested in accordance with DIN EN 14291
Approved by DVGW | SVGW

Contents

Spray can 400 ml

Storage

Ideal storage temperature +5 °C to +25 °C
store in a dry place

The leak detector for gas and pressure systems can find even the smallest holes. Even leaks that only appear under high pressure can be reliably identified.

Robust

Oxygen compatible, non-flammable and can be used at cold ambient temperatures.

Flexibel

Can be used for testing almost all types of gas and also for leak detection of flammable gases.

Gentle

The spray containing environmentally-compatible propellant gas and anti-corrosion protection does not attack metals and does not create any stress corrosion cracking in plastics such as PVC and PE.
